

Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Ideation Phase: Empathy Map Canvas

Date:	October 3, 2026	Maximum Marks:	4 Marks
Team ID:	SWTID-2026-2585	Project Name:	Standard Laptop Automation

Empathy Map Canvas: Overview

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviors and attitudes. It is a useful tool to help teams better understand their users. Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of helping participants consider things from the user's perspective along with his or her goals and challenges.

- **Target Persona Focus:** IT Procurement Team Member / Hardware Configuration Specialist.

Empathy Map Quadrants (Say, Think, Do, Feel)

The empathy map is organized into four core quadrants surrounding the user:

1. Says (Verbatim quotes or common expressions from users)

- *"Why is it taking so long for this laptop request to get approved and routed to us?"*
- *"I spend too much time manually checking request items and updating task details."*
- *"We keep missing configuration deadlines because requests get lost in administrative queues."*

2. Thinks (Underlying beliefs, thoughts, and assumptions)

- **Beliefs:** The current manual IT procurement process is outdated and prone to human errors.
- **Concerns:** Worrying about delayed employee onboarding due to slow hardware provisioning.

- **Aspirations:** Wishing for a fully automated workflow that handles task generation and assignments seamlessly without manual overhead.

3. Does (Observable actions and behaviors)

- Manually opens ServiceNow to review individual service requests and track approvals.
- Repeatedly copies and pastes request details to create separate catalog tasks.
- Manually updates short descriptions and assigns groups (like Hardware) step-by-step.
- Chases down approvals via emails and phone calls when bottlenecks occur.

4. Feels (Emotions, frustrations, and anxieties)

- **Frustrated:** Annoyed by repetitive administrative tasks and manual data entry overhead.
- **Stressed:** Anxious about missing SLA deadlines for new employee laptop setups.
- **Relieved / Optimistic:** Hopeful that implementing ServiceNow Flow Designer will automate routing and bring efficiency to daily operations.

Pains and Gains Summary (Optional Extension)

- **Pains:** Delays in laptop configurations, manual intervention errors, lack of automated task assignment, and poor resource allocation within the IT department.
- **Gains:** Streamlined procurement workflow, automated catalog task generation via Flow Designer, reduced user wait times, and optimized productivity.
