

Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Requirement Analysis: Customer Journey Map

- **Project Name:** Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
- **Scenario:** Requesting, approving, configuring, and receiving a standard laptop through ServiceNow.

Customer Journey Stages

1. Entice (Awareness & Need)

- **What people experience:** The employee realizes they need a standard laptop for work (e.g., new hire onboarding or hardware replacement), or the IT procurement team recognizes the need to streamline old manual request channels.
- **Interactions (Touchpoints):** Internal company communications, IT policy guidelines, or word-of-mouth about hardware availability.
- **Goals & Motivations:** *"Help me find out how to order equipment quickly without administrative confusion."*
- **Positive Moments:** Realizing a standard laptop model is pre-approved and officially supported by the organization.
- **Negative Moments:** Uncertainty about eligibility, hardware standards, or where to start the request.
- **Areas of Opportunity:** Provide a clear, visible IT hardware catalog link right on the company intranet homepage.

2. Enter (Discovery & Initiation)

- **What people experience:** The user navigates to the ServiceNow platform, opens the Service Catalog, locates the Hardware section, and finds the "Standard Laptop" item.
- **Interactions (Touchpoints):** ServiceNow Portal, Service Catalog, Hardware Category view.
- **Goals & Motivations:** *"Help me place my standard laptop order with minimum friction."*
- **Positive Moments:** Clean, organized interface of the ServiceNow catalog making it easy to select the standard model.

- **Negative Moments:** Hidden catalog items or complicated navigation menus slowing down initial order placement.
- **Areas of Opportunity:** Optimize search tags so typing "laptop" instantly routes users to the standard hardware item page.

3. Engage (Core Process, Approval & Configuration)

- **What people experience:** The user clicks **Order Now**. The request triggers an approval workflow, after which ServiceNow's Flow Designer automatically generates a Catalog Task assigned to the **Hardware** group with the short description *"Laptop need to Configured"*.
- **Interactions (Touchpoints):** ServiceNow Request screen, Approver inbox, Requested Item (RITM) view, and Catalog Task record.
- **Goals & Motivations:** *"Help me get my order approved and configured promptly so I can start working."*
- **Positive Moments:** Automatic routing of tasks via Flow Designer immediately upon approval—eliminating manual emails or phone calls.
- **Negative Moments:** Delays if managers take time to approve, or manual oversight in traditional setups where configuration tasks get forgotten.
- **Areas of Opportunity:** Use automated reminder notifications for approvers to speed up the approval gate.

4. Exit (Delivery & Fulfillment)

- **What people experience:** The hardware team receives the auto-assigned task, configures the laptop, marks the task complete, and delivers the device to the end-user.
- **Interactions (Touchpoints):** ServiceNow task updates, email status notifications, physical handover of the laptop.
- **Goals & Motivations:** *"Help me receive my ready-to-use laptop with zero wait time."*
- **Positive Moments:** Receiving a fully configured, ready-to-use laptop right on schedule.
- **Negative Moments:** Lack of transparency during the final configuration stage if tracking isn't updated.
- **Areas of Opportunity:** Implement automated status updates notifying users when their laptop configuration is complete.

5. Extend (Post-Service & Review)

- **What people experience:** The user begins working on the new laptop, experiences high productivity, and the IT department enjoys optimized resource allocation and lower manual overhead.
- **Interactions (Touchpoints):** IT satisfaction surveys, support feedback portals.
- **Goals & Motivations:** *"Help me maintain high productivity and ensure future hardware requests are just as smooth."*
- **Positive Moments:** A fast, hassle-free procurement cycle that builds trust in internal IT operations.
- **Negative Moments:** None, once automation replaces the old error-prone manual tracking.
- **Areas of Opportunity:** Track metrics and fulfillment times via ServiceNow dashboards to continuously measure efficiency gains.
