

Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Project Design Phase: Proposed Solution Template

Date:	October 3, 2026	Maximum Marks:	4 Marks
Team ID:	SWTID-2026-2585	Project Name:	Standard Laptop Automation

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No	Parameter	Description
1.	Problem Statement (Problem to be solved)	Manual IT procurement for standard laptops suffers from fragmented communication, manual approval chains, and lack of visibility. This results in fulfilment delays (1–3 weeks), missed onboarding deadlines for new hires, high administrative overhead, and excessive follow-up tickets asking "Where is my laptop?".
2.	Idea / Solution description	An end-to-end automated procurement workflow developed on ServiceNow using Flow Designer. It features a self-service Service Catalog item for standard laptop configurations, dynamic multi-tier approval routing based on cost centre and management hierarchy, automated task triggers for vendor PO creation/warehouse provisioning, and real-time status updates pushed directly to employees via Microsoft Teams/Slack.
3.	Novelty / Uniqueness	• Low-code automation using ServiceNow Flow Designer, removing complex hardcoded legacy scripts. • Integration of cross-platform channels (HR tools, ITSM, and Microsoft Teams/Slack) for instant, single-click approvals. • Event-driven fulfilment that automatically links stock levels in ITAM (IT Asset Management) to trigger vendor reorders without human intervention.

4.	Social Impact / Customer Satisfaction	Customer Satisfaction: Drastically improves employee onboarding experience by ensuring Day-1 hardware readiness and providing complete order transparency. Operational Efficiency: Reduces IT Service Desk manual workload by up to 80% and cuts laptop lead times by 70%. Employee Productivity: Eliminates downtime for existing workers replacing damaged or end-of-life laptops.
5.	Business Model (Revenue Model)	Internal Enterprise Value: Cost reduction achieved by saving hundreds of administrative labour hours per month across IT, HR, and Finance. Commercial SaaS/Consulting Model: Managed service and template implementation package sold to enterprises looking to modernize ServiceNow ITSM and ITAM workflows.
6.	Scalability of the Solution	Highly scalable across any enterprise size. The modular Flow Designer framework can easily be extended to automate additional IT asset requests (mobiles, monitors, software licenses, accessories), multi-region vendor integrations, and complex localized compliance policies without redesigning the core workflow logic.
