

PROJECT DOCUMENTATION

Streamlining IT Procurement – Automating Standard Laptop Orders with Flow Designer

1. Introduction

This document describes the functional design and implementation of the Standard Laptop procurement automation developed using ServiceNow Flow Designer.

Project Title: Streamlining IT Procurement – Automating Standard Laptop Orders with Flow Designer

Team Members: Dhanushkumar T (Team leader), Arunachalam, Lawanya B, Lathiga Sri R, Anushree R.

Team ID: SWTID-2026-2585

2. Project Overview

Purpose: Automate the processing of Standard Laptop requests so that, after approval, a Catalog Task is automatically created and assigned to the Hardware team for configuration.

Key Features:

- Standard Laptop Service Catalog request
- Service Catalog trigger in Flow Designer
- Automatic Catalog Task creation
- Configured task description
- Hardware assignment group
- Approval-dependent workflow execution

3. Solution Architecture

The solution uses ServiceNow Service Catalog, Requested Items, approvals, Flow Designer, and Catalog Tasks as the main components.

End-to-end process:

1. User selects Standard Laptop from the Service Catalog.
2. A Requested Item is created.
3. The request proceeds through the approval process.
4. After approval, the Standard Laptop Task flow processes the Requested Item.
5. The flow creates a Catalog Task.
6. The Catalog Task is assigned to the Hardware assignment group.
7. The Hardware team can use the task for laptop configuration.

4. ServiceNow Configuration

The implementation follows the project procedure supplied for the Standard Laptop automation.

Flow Name: Standard Laptop Task

Application: Global

Run User: System user

Trigger: Service Catalog

Action: Create Catalog Task

5. Flow Designer Configuration

The Standard Laptop Task flow is configured to receive the Service Catalog event and create a Catalog Task using the Requested Item.

Configured action values:

- Requested Item: Requested Item Record
- Table: Catalog Task
- Short Description: Laptop needs to Configured
- Description: Laptop needs to Configured
- Assignment Group: Hardware
- Approval: Approved

The flow is saved and activated before it is associated with the Standard Laptop Catalog Item.

6. Service Catalog Configuration

The Standard Laptop Catalog Item is configured to use the Standard Laptop Task flow through its Process Engine configuration. The flow is therefore associated with the Standard Laptop request process.

7. Workflow / Process Flow

Standard Laptop Request → Approval → Standard Laptop Task Flow → Create Catalog Task → Hardware Assignment

The implementation procedure verifies the result by opening the Requested Item and checking its Catalog Tasks section for the generated task, short description, and assignment group.

8. Testing

Testing includes User Acceptance Testing and performance/execution observations. The UAT test cases verify request submission, approval, flow execution, Catalog Task creation, task description, and Hardware assignment.

Quantitative response-time, throughput, and concurrency measurements were not captured in the available project evidence and are therefore not reported as measured values.

9. Screenshots / Demo

The following evidence should be included in the final project documentation:

- Flow Designer – Standard Laptop Task
- Service Catalog trigger
- Create Catalog Task configuration
- Flow activation
- Standard Laptop – Process Engine flow association
- Standard Laptop order
- Approval
- Requested Item
- Automatically created Catalog Task
- Catalog Task showing Hardware assignment group
- Demo video link

Power your workflow applications

The screenshot shows the ServiceNow Workflow Studio interface. At the top, there are tabs for Playbooks, Flows (selected), Subflows, Triggers, Actions, and Decision tables. Below these tabs is a table of flows. The table has columns for Name, Application, Status, Active, and Updated. The flows listed include 'Standard laptop task', 'lap', 'Auto Classify School Tickets', 'Auto Classify School IT Tickets', 'IAR SLA Reminder', 'New Application Admin Task State Updated', 'New Application Task State Updated', 'New Request App Approval Flow', and 'Collaboration Request Flow'. A 'New' dropdown menu is open, showing options like Playbook, Flow, Subflow, Trigger, Action, Decision table, and Help me decide. The 'Flow' option is selected. The interface also shows a 'Latest updates' section on the right.

Power your workflow applications

10. Known Issues

No defect was recorded in the documented positive execution path. A controlled negative-case execution and quantitative load test were not included in the available implementation evidence.

11. Future Enhancements

- Add additional procurement categories and automated assignment rules.
- Introduce notifications for Hardware team members when a Catalog Task is created.
- Add richer task status tracking and reporting.
- Introduce controlled performance benchmarking and load testing.
- Extend the workflow to cover additional IT hardware procurement scenarios.
